SKILLS

- Programming Languages: Dart, C++
- Mobile Development: Flutter, REST API Integration, JSON Data Handling, Responsive UI Design
- State Management: Provider, Riverpod, Bloc
- Tools: Git, GitHub, VS Code, Android Studio
- Frontend Skills: UI Development, API Consumption, Navigation, Form Validation
- Other Skills: Problem Solving, Teamwork, Fast Learning, Communication Skills

SOFT SKILLS

- Teamwork and collaboration
- Problem-solving and analytical thinking
- Eagerness to learn new technologies to Khmer

LANGUAGES

- Khmer: Native
- English: Basic (Actively improving)

PROFILE

I am an IT student and Flutter Developer passionate about building cross-platform applications. I have skills in Dart, REST API integration, and state management, with experience building responsive e-commerce applications including authentication, cart, order, and payment features. I am interested in developing practical and user-friendly mobile applications that solve real-world problems.

WORK EXPERIENCE

Project

1 E-Shop Mobile Application (Flutter E-Commerce App)

Role: Flutter Frontend Developer

Team: Flutter Frontend + Spring Boot Backend

Technologies: Flutter, Dart, REST API, JWT, Provider, Git, Spring Boot

Responsibilities and Features

- Developed a cross-platform e-commerce application using Flutter and Dart for Mobile, Tablet, Desktop, and Web
- Designed and implemented a fully responsive UI that adapts to different screen sizes and device layouts
- Integrated RESTful APIs for:
 - User authentication
 - Product management
 - Categories and subcategories
 - Cart functionality
 - Address management
 - Order processing
 - Bakong payment integration
- Implemented JWT authentication and secure token handling
- Managed application state using Provider
- Built responsive and reusable UI components
- Connected Flutter frontend with Spring Boot backend services and API testing workflows

2 Household Food System Application

Role : Full-Stack (Web Frontend + API Backend)

Technologies: JavaScript, Node.js, Express, PostgreSQL, Docker, REST API, HTML/CSS, Git

Responsibilities and Features

- Built a full-stack household food system linking a responsive web frontend to a Node.js/Express RESTful API backend.
- Designed and managed relational database schemas in MySQL for food items, categories, and inventory tracking.
- Containerized backend services and database environments using Docker to streamline development and deployment.
- Integrated secure REST API endpoints for user authentication, food item management, and inventory updates.
- Implemented responsive UI components ensuring optimal display across mobile, tablet, and desktop screens.

EDUCATION

Bachelor of Information Technology (Year 3, Semester 1)

Royal University of Phnom Penh (RUPP)

Expected Graduation: 2027
